(a) Boundary localization/warping contrast
11/11 folds, identical window set
continuous PCC vs original ECG
(common support)
fixed affine (C1→C3)
oracle affine (C2→C4)
GT cycle boundaries
predicted boundaries
(b) Fold spread by condition
common support 0.351±0.039
continuous PCC (common support)
C0 dense
C1 GT+fix
C2 GT+orc
C3 pred+fix
C4 pred+orc
(c) Amplitude recovery is anchor-conditional
ΔΔ=+0.135, 95% CI [+0.110,+0.158]
amplitude gain @ GT bounds (C2−C1)
amplitude gain @ predicted bounds (C4−C3)
Δ PCC from oracle per-cycle affine
MMECG LOSO fold
